Employment & Training Administration,
Region IX
U.S. Department of Labor

PREFACE

The Annual Planning Information (API) report contains a formidable array of information including not only traditional economic analysis, but also data necessary for the preparation of the SDA Job Training Plans required by the Job Training Partnership Act and for the day-to-day operation of employment and training programs at the local level.

Prepared by the Department of Economic Security through the support of the Arizona State Job Training Coordinating Council, this API publication is provided to all JTPA Service Delivery Areas in the state to be used in program planning and evaluation, economic analysis and development, resource allocation and funding, job search assistance, job development and placement, employability growth, vocational counseling, and overall program administration.

The method used to generate most of the projections in this publication is based on a census share approach. The 1980 Census serves as base data from which the 1980 percentages, or census shares, are calculated for 1986 and 1987 projections. Of course, the percent distributions that existed in 1980 will not continue throughout the decade. However, at present, we have no other source to utilize as a base.

To the extent practical, all the data contained herein have been broken down to the SDA level. Efforts are continuing to provide each SDA with as much labor market information as possible.

The Research Administration of DES is ready to assist in the use of this publication. If any SDA, Private Industry Council, or other interested party wishes to have a technical assistance program concerning labor market information presented in its area, please contact Barbara Keene or Clara Dunn at 255-3871. Other questions regarding the API may also be directed to these individuals.

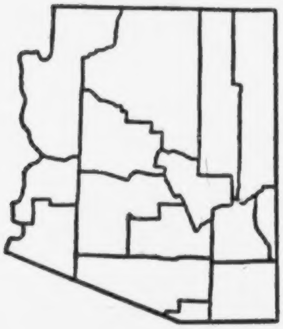
ARIZONA



While 1985 was a good year for Arizona's economy, it did not approach the extraordinary economic performance of the prior year. Over 100,000 jobs were created during 1984, with increases of more than 20 percent recorded in construction and business services. A record low unemployment rate for the state of 4.3 percent was recorded in November. By January 1985, however, the rate had jumped to 5.5 percent, beginning a trend of increasing unemployment in Arizona.

In spite of rising unemployment, employment in Arizona has continued to increase, but at more moderate rates than during the recovery of 1983-84. The construction and manufacturing sectors, stalwart performers during the earlier stages of the expansion, were still growing, but with diminished intensity. By September 1985, employment in these key industries actually was falling. Construction employment has responded to an increasing surplus of commercial office space in the metropolitan regions and the completion of major power plant construction projects in the rural areas. Manufacturing, particularly the high technology sector, has been pressured by weak product demand, excess inventories, and formidable foreign competiton.

By the end of 1985, layoffs in these industies were contributing to the rising unemployment rate. Unemployment will peak in early 1986 before the rate of job creation increases later in the year. Employment will continue to grow, but at a very sluggish pace compared to 1984 and early 1985. Most new jobs in the near future will be in the trade and service industries, with government providing another major source of job opportunities.

The state's rapid rate of population growth, combined with a generally bright outlook for tourism, should generate strong increases in retail trade and population-serving activities such as financial services, health care, personal services, hotels and resorts, and state and local government services. These industries will play an increasingly important role in the growth of Arizona's economy in the future. The United States has been evolving away from a goods-producing economy and towards a service-producing economy for years and is expected to continue in this direction. The trend has been amplified in Arizona by the importance of tourism to the regional economy.

National and international economic conditions should improve sufficiently during late 1986 and 1987 to induce renewed expansion in Arizona comparable to its historical pattern. Moderate interest rates should accommodate a relatively high level of homebuilding, while road construction in Maricopa County also should stimulate the demand for workers. In addition, manufacturing employment should expand more rapidly. Aerospace firms are expected to continue hiring production and office workers. Electronics firms should benefit from reduced inventories and a gradual devaluation of the dollar, enhancing their international competitiveness.

A result of a lower-valued dollar may be improved retail trade in the border regions, making American goods more affordable for Mexican consumers. Unfortunately, this may be more than offset by falling oil prices, which would have a negative effect on the Mexican economy and the value of the peso.

Employment opportunites in Arizona will grow in the next two years, but at a slower pace than during the recent economic boom. Most jobs will be located in the urban areas. Unemployment will remain very high in nonmetropolitan Arizona, where jobs will continue to remain scarce. Conditions should improve in the larger towns and near recreation areas, but a grim outlook persists for the border regions and copper mining communities.

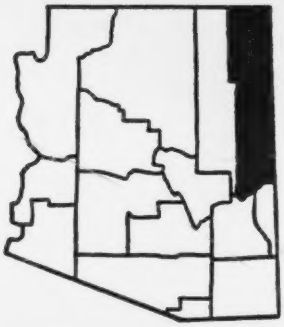
APACHE COUNTY



The economic base of Apache County consists mostly of government, services, and wood products. In recent years, power plant construction has played an important role in the county economy. The remoteness of the region, combined with a scarcity of job opportunities in the reservation areas, are the major reasons for the high rate of unemployment in Apache County.

Construction employment declined in the county during 1985 as the first unit of the Springerville generating station was completed. However, the number of jobs for construction workers should increase in early 1986 as work begins on Unit 3 of the St. Johns power plant. With Unit 2 at Springerville scheduled to begin construction by early 1987, these workers should continue to be in demand. As the power plants are completed, operations and maintenance workers will be hired, but the number of jobs available will be much lower than during the construction phases. Some construction laborers may find work in the southern portion of the county, where homebuilding activity has been expanding.

Many of the jobs in the trade and service industries are generated by tourist activity along I-40 and in the White Mountains. Tourism has grown this year and should continue to expand in the future. Most of the job opportunities will be in food service, clerical, and various semiskilled occupations.

Apache County's distance from major sources of employment has contributed to one of the highest rates of unemployment in the state. Unemployment will probably remain high unless unforseen developments cause the rate of employment growth to increase.

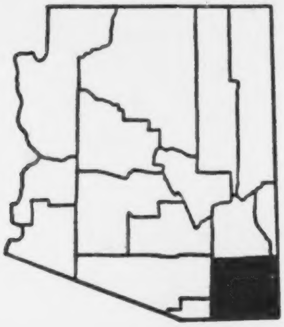
COCHISE COUNTY



Cochise County and southeastern Arizona are in a period of transition. The regional economy traditionally has been based on copper mining and smelting, government, and retail trade. The decline of the copper industry in recent years resulted in the loss of hundreds of jobs. At the same time, job losses in the retail sector have been severe in border communities that depend on trade with Mexican citizens. As the Mexican peso continues to devaluate, the volume of retail trade will slide, resulting in even more lost jobs.

Some parts of the county are prospering by comparison. The Sierra Vista area has been expanding, and the population is expected to continue to grow rapidly. This will create jobs for construction workers as well as for food service workers, cashiers, and clerical workers. As the area becomes more popular among retirees, additional jobs in fields such as medical and financial services should become available. Another major employer is Fort Huachuca, long a mainstay of the local economy. The emphasis on electronics and communications at the base should result in employment opportunities for workers with technical training. Aside from Sierra Vista, most government jobs will probably be located in Bisbee and Douglas.

A sector which may contribute more to the Cochise County economy in the future is agriculture. The development of fruit orchards in the Willcox area may provide more jobs in harvesting, packing, and processing. Unfortunately, the ongoing problems of the Mexican economy and the copper industry will reduce employment growth in the depressed areas of the county for the forseeable future.

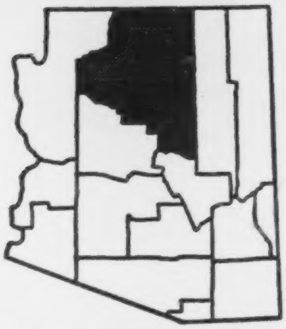
COCONINO COUNTY



With an economy based on tourism, government, forest products, and manufacturing, Coconino County is more diversified than most of northern Arizona. Like most other counties in the state, however, unemployment increased during 1985 and had exceeded 11 percent of the labor force when summer began. Employment growth will be relatively slow during the next two years, but the Flagstaff area should attract most of the new jobs that are created.

Because of the importance of the tourism industry, particularly in the summer months, occupations in the trade and service industries are expected to be the major sources of new jobs. Cashiers, sales clerks, and food service workers will be employed in increasing numbers during the next two years. Tourism in northern Arizona was strong in 1985 and should continue to expand in the future.

Government is the major source of jobs in Coconino County, with Northern Arizona University ~~in~~ Flagstaff as the largest employer in the public sector. The enrollment increases anticipated at NAU should result in budget increases and the hiring of additional clerical staff, food service workers, and maintenance personnel.

The construction industry has grown considerably throughout Arizona during the last two years, but jobs for construction workers will be less plentiful in 1986. By 1987, the industry should be hiring increasing numbers of laborers, equipment operators, and skilled craft workers. Manufacturing is expected to exhibit a similar pattern: 1986 will be sluggish, but by 1987 assemblers and technicians should find increasing numbers of job opportunities, mostly in the Flagstaff area.

Although jobs will continue to be scarce in the rural areas, Coconino County should experience more employment growth than the other northern counties. Flagstaff will command most of the new jobs, but the warmer months will bring employment opportunities in increasing numbers to the Grand Canyon region as well as other recreation areas in the county.

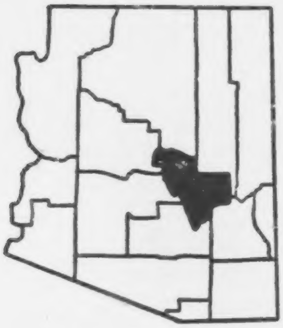
GILA COUNTY



For most of its history, the Gila County economy has been based on copper mining and smelting. The persistent problems experienced in this industry have led to very high unemployment, especially in Miami and Globe. The long duration of the depression in the copper industry has led to a stagnant economy and a declining labor force. Although conditions may improve enough to recall a few copper workers in the future, employment levels are unlikely to approach those of a few years ago.

Government continues to be a major employer, along with trade and services. Most of the jobs available in these industries will be for office clerks, secretaries, sales personnel, and food service workers. Separations and turnover may create some job openings for heavy equipment operators, laborers, and other workers in the building trades.

Unlike the southern portion of Gila County, which is closely linked to copper mining, the northern region of the county depends heavily on tourism to generate jobs for residents. The Payson area and the surrounding national forests are increasingly popular weekend recreation areas for inhabitants of the metropolitan areas. This should continue to result in rapid employment growth in hotels and lodgings, restaurants, and other trade and service establishments. Population growth and home construction should create new jobs in the building trades as well as in the wood products industry.

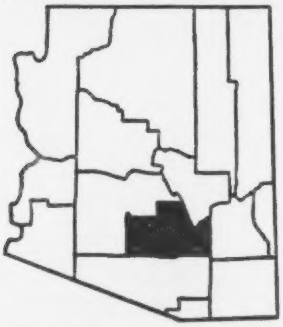
PINAL COUNTY



Pinal County's economic base for employment has historically been copper mining, agriculture, and government. The troubles experienced by the copper mining industry are well known. The primary causes of copper's problems include: higher quality foreign copper produced with lower costs, environmental cleanup costs, and weak demand for copper. Over the last three years, more than 3,000 jobs have been lost in mining and smelting. The structure of the economy, however, is in the process of transformation through slow growth in the construction and manufacturing industries. The unemployment rate, as a result, dropped to only 12.6 percent in August 1985 from an annual average rate of 14.9 percent in 1982. The pattern of slow growth should continue during 1986.

Two major industries that appear to have potential are construction and manufacturing. Casa Grande is beginning to attract some attention from manufacturers who are thinking of expanding, since it appears to be ideally situated between Tucson and Phoenix and has a fairly sizeable labor force to draw upon. Future growth in manufacturing will create a demand for managers, clerical personnel, skilled and semiskilled laborers, and construction workers. The town of Apache Junction is the other area in the county that is currently expanding. As population expands in the town, there should continue to be a fairly strong demand for occupations in construction, trade, and services.

The stabilizing factor in Pinal County's economy is government. The prison facilities in Florence will have some potential for future job opportunities. Some of the more likely occupations that should provide openings include correction officer, clerk, and secretary. The bulk of the openings, however, will be the result of turnover and separations since the number of new jobs that will be created is very minimal.

The economic outlook for the county is mixed. Those areas that depend on copper mining for employment will continue to suffer, while areas with more diverse economic bases should perform much better.

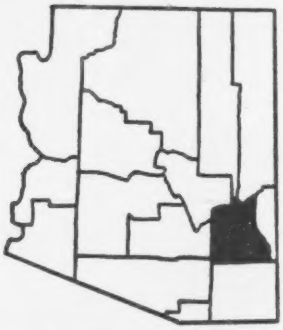
GRAHAM COUNTY



The economic base of Graham County consists of agriculture, copper mining, and trade. While mining is not a major activity in the county, many residents of the Gila River Valley have worked in mining and smelting in neighboring Greenlee County for years. Safford has functioned as a center for trade and commerce for both counties.

The severe slump in the copper industry has affected copper workers who live in Graham County as well as workers in the trade and service industries. The other major industry, agriculture, also has not prospered as it has in years past. The combination of conditions in copper and agriculture has resulted in very slow employment growth in the support industries. Unemployment remains high, and the labor force is shrinking due to a general lack of job opportunities.

The largest employer in the county is government, with Eastern Arizona College in Thatcher and the federal prison and county government in the Safford area being the major employers. These facilities are expected to offer employment in occupations such as janitor, clerical worker, security guard, corrections officer, and maintenance worker, with most of the openings occurring due to separations and turnover.

A turnaround in agriculture or the copper industry is not expected in the near future. Most job openings will be in government and in the trade and service industries. Since the rate of growth is not expected to be very strong, most jobs will be the result of turnover in relatively low-skilled occupations.

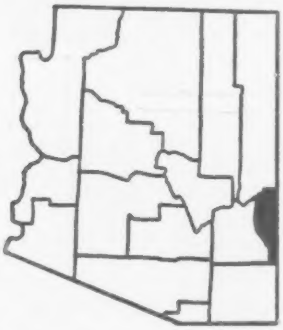
GREENLEE COUNTY



It is difficult to discuss employment and unemployment in Greenlee County without mentioning the copper industry. With more than two-thirds of the county labor force directly employed by the copper industry in the past, Greenlee County was characterized by relatively high wages and a volatile unemployment rate.

The state's copper mines and smelters have been in a depressed state since 1982, with over 1,000 jobs lost during the period. Some workers have moved away in search of opportunities elsewhere. Many others have stayed to face a ravaged economy with very few jobs, low wages, and little or no economic growth. With no end to the copper slump in sight, it is unlikely that these unfortunate conditions will change very soon.

The job openings that do occur will be in occupations such as truck driver, laborer, helper, food service worker, cashier, and clerk. It is unlikely that the total number of jobs will grow much, if at all, during the next year. Most of the job opportunities that become available will be due to separations or turnover.

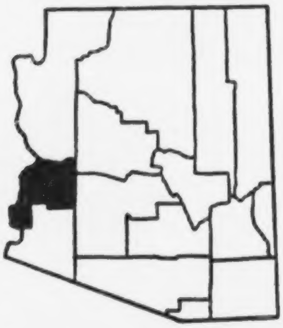
LA PAZ COUNTY



La Paz County's economy is based primarily on tourist-related trade and services. However, agriculture, historically the major economic activity in the county, continues to contribute to the local economy. Although the unemployment rate has gone up from an annual average of 11.8 percent in 1984 to an average of 14.2 percent through August 1985, a small number of jobs will be available during 1986.

Parker is the center for commercial and recreational activities in La Paz County. The Parker area will have some job opportunities for cashiers and food service workers. County and city governments in Parker will also create some job opportunities for secretaries, clerks, and office workers.

The level of recreational activities in the Colorado River Valley has been somewhat lower than expected, which has resulted in moderate growth in trade and service industries. The sources of future economic growth in La Paz County depend on the expected increase in the demand for recreation and water sports in Arizona and California, with most job openings in service and trade-related entry-level occupations.

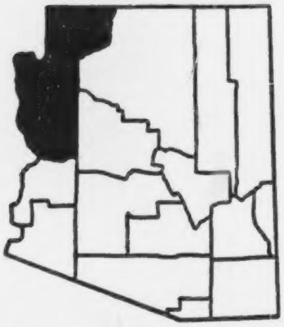
MOHAVE COUNTY



The economic base of Mohave County has been a mixture of tourist-related activities and manufacturing, with manufacturing assuming an increasingly important role in recent years. Most of the population is located in communities along the Colorado River or in Kingman. The unemployment rate in the county has gone up from 8.4 percent in 1984 to 10.3 percent in August 1985. However, moderate growth is expected to follow in 1986.

The towns in the Colorado River Valley depend on tourist activities as a major source of employment opportunities. Growth of Laughlin, Nevada as a gaming and recreational center is providing job opportunities on both sides of the river for residents of the Bullhead City-Riviera area. The rapid expansion of tourism and other recreational services will stimulate the retail trade industry, creating job opportunities for cashiers, laborers, and food service workers in the county.

Lake Havasu City is a major manufacturing center in the county. It is also heavily influenced by tourism and other recreational activities. Manufacturing employment has been growing and will continue to increase, with job opportunities for laborers, assemblers, and maintenance workers. However, actual hiring levels will fluctuate according to the relative competitiveness of the local manufacturers with national and international markets.

Kingman is the center for government and related job opportunities in the county. Rapid population growth in the county will create employment opportunities in clerical occupations along with other basic public services such as police, fire protectors, and educators. However, most job openings in the near future will result from separations and turnover in the clerical occupations. The high rate of population growth also enhances the demand for housing, recreation, and medical services which in turn results in more employment opportunities in retail trade, health, personal services, and construction. Most of these jobs will be entry-level positions for unskilled and semiskilled workers in the Colorado River communities.

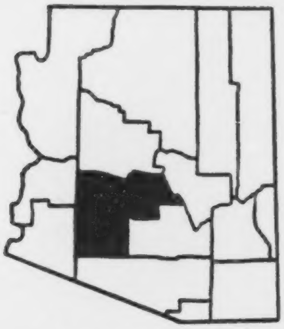
MARICOPA COUNTY



Maricopa County has been one of the fastest growing metropolitan areas in the country. Wage and salary employment increased by over 11 percent in 1984 and by about 7 percent in 1985. Although agriculture still plays an important role in the local economy, the county has diversified its industrial base in recent years. This diversity, including activities such as electronics and aerospace manufacturing, financial services, tourism, and trade will contribute to the future growth and stability of the economy. However, growth will be much slower in 1986 and 1987 than it was during the recent economic expansion.

Several factors have contributed to the loss of momentum by the county economy this year. The high technology sector has been slowed by lower product demand, high inventories, and intense international competition, resulting in many layoffs. It is expected that these firms, both nationally and locally, will be adding workers again by the end of 1986. Aerospace manufacturers and other defense contractors are hiring assemblers and technicians at a rapid clip and will continue to do so through 1987.

A surplus of multi-family housing and of commercial office space has yet to result in massive layoffs in construction. The excess supply, combined with slowing demand for new structures, may result in fewer jobs for laborers, equipment operators, electricians, plumbers, and carpenters during 1986. Moderate interest rates and a high volume of road building activity will create new demand for construction workers by 1987.

Rapid population growth in Maricopa County has stimulated growth in the trade and service industries. Jobs will continue to be created for clerical workers, sales personnel, managers, drivers, and food service workers in these industries. Financial services also are expanding, providing opportunities for tellers and office clerks. Tourism also has had a major impact on employment in these industries. Landscapers, housekeepers, and desk clerks are among the occupations that will be in demand in hotels and lodging, an industry that will benefit both from increased tourism and increased business and convention activity.

In general, the county economy is expected to remain strong for years to come. However, slower growth at the national level, combined with the problems of the semiconductor industry, will result in a slower rate of growth in job opportunities next year.

CITY OF PHOENIX

Phoenix has enjoyed extraordinary employment growth during the last two years. The economic base is similar to that of the balance of Maricopa County, but some differences are apparent. As the state capitol and major urban center, Phoenix has a high concentration of jobs in government and in business and financial services. The city also includes some areas of unemployment and poverty which are more extensive than those outside the city.

Government; business services; and finance, insurance, and real estate all should create a large number of jobs for clerks, secretaries, computer operators, maintenance workers, and security guards. Since the city's population and commercial base are expected to continue expanding, these types of jobs will be available for years to come.

Construction activity is strong throughout the county, but Phoenix is where most of the commercial and industrial construction is occurring. Residential building also is an important source of jobs. Construction employment will decline as the surplus of commercial office space grows, but home building and road building should be sufficiently robust to prevent massive layoffs of construction workers during the next two years.

Manufacturing employment will follow a pattern similar to the rest of the county. Defense contractors will continue to hire assemblers and technicians, while other manufacturers of semiconductors and electronics components will be reducing employment levels. By late 1986 or early 1987, the electronics industry should be expanding again.

Phoenix will continue to be one of the nation's fastest growing cities for the next several years. Although the rate of growth has diminished, causing unemployment to increase, jobs will continue to be available in a wide range of industries and occupations.

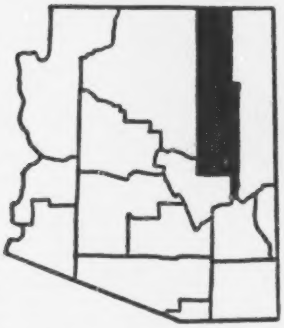
NAVAJO COUNTY



The main components of Navajo County's economic base are lumber, tourist-related trade and services, and government. Approximately 800 new jobs were added during 1985 and these sectors will provide most of the job openings in the county in 1986.

Tourism is very important in Navajo County. Employment opportunities in trade and service areas depend on the level of tourist activities, and the success of the tourism season is highly dependent upon the health of the national economy. If the national economy performs fairly well in 1986 and 1987, Navajo County will experience growth due to the area's increasing popularity throughout the year as a destination for in-state tourists. As a result, some job openings should be created for sales workers, cashiers, food service workers, managers, and maintenance workers.

Most of Navajo County's manufacturing employment is in lumber and paper products. The direction of interest rates and consequently the strength of the construction industry are important factors in determining employment in this area. The southwestern United States is expected to attract more population over the next several years, creating strong demand for housing and, therefore, the lumber to build it. This could result in some openings for heavy equipment operators, truck drivers, and other logging-related occupations.

Government is the largest employer in the county. Many of these people are employed on the reservations and in the school system. As the population expands, more government services should be required in the future, but most job openings will result from separations and turnover in managerial, clerical, and secretarial positions.

Most employment opportunities in Navajo County will come from gradual growth and turnover in lumbering, construction, government, and tourist and population-serving industries. More industry needs to be attracted to the county in order to have better employment opportunities in the years ahead.

PIMA COUNTY

The economic base of Pima County has been a mixture of tourism, services, trade, and manufacturing industries, with manufacturing assuming a major role in recent years. The structure of the county is in the process of a transformation which has accelerated during the mid 1980s. As a result, the copper industry is not as prominent in determining the economic fortunes of the Tucson metropolitan area as it has been in the past. Mining employment has fallen steadily in 1984 and 1985 and is expected to continue to decline in 1986. The effect on Ajo and other mining industry communities has been devastating, but the Tucson area has managed to develop other sources of vitality.

Manufacturing employment in the metro Tucson area has more than doubled in the past ten years. Despite the slower statewide growth in manufacturing, Pima County realized an employment increase in this sector. Increases in manufacturing employment have been the result of rapid hiring activity by the state's major defense contractors in the county. With increased defense spending, employment within the high technology firms and aerospace manufacturers will continue to grow, with job openings being created for assemblers, technicians, engineers, and clerical workers.

The construction industry has added thousands of jobs in Pima County during the last two years. The construction of new roads, hotels, and resorts in combination with home-building activity has resulted in 2,000 new jobs in 1985 alone. Construction employment, however, is expected to decline in 1986 as some major projects underway are completed.

The rapid expansion of tourism and other business services will stimulate Pima County's retail trade sector. After the sluggish years of 1982 and 1983, 1984 and 1985 brought renewed employment growth in Tucson-area retail trade. Two persistent economic problems in southern Arizona--a weak market for copper and a generally weak Mexican economy--have inhibited growth to some degree, but the effects of these factors are being partially offset by continued strength in other sectors. Jobs will continue to be created in general merchandise stores, food stores, restaurants, and other retail establishments.

The service sector in Pima County is experiencing explosive growth. Business services, such as accounting, legal services, temporary help agencies, maintenance services, and equipment repair and rental services have been booming in much the same way as in Maricopa County and should continue to do so. Hotel and resort operators also should enjoy a strong year in 1986. Hundreds of first-class resort rooms are being added to Pima County's supply of hotel and lodging facilities. This will enhance the ability of Tucson to attract a larger share of tourist and convention business. Many opportunities will exist for cooks, housekeepers, maintenance workers, desk clerks, and landscapers.

In spite of the slump in the copper mining industry, the Tucson metropolitan area has managed to increase the diversity of its economic base substantially in recent years. Overall, the prospects for employment growth in Pima County are very good.

SANTA CRUZ COUNTY

The economic base of Santa Cruz County consists primarily of retail and wholesale trade, with a small manufacturing sector. Unemployment improved during the first few months of 1985 compared to the 1984 annual average of 14.0 percent. The August 1985 unemployment rate of 21.0 percent is expected to come down as wholesale trade in fruits and vegetables increases during the winter season. Overall, there are some positive signs of economic growth, but unemployment will remain high in 1986.

The border community of Nogales is the center of Santa Cruz County's labor force and employment. Nogales' proximity to Mexico makes it an export center for U.S. goods entering Mexico and Mexican products entering the U.S. Retail trade is by far the county's biggest industry and Mexican nationals make up a large portion of the retail market. But the Mexican economy is plagued by foreign debt problems, weakening the value of the peso relative to the dollar. As a result, American goods become more expensive to Mexican consumers, which reduces demand and employment in trade. Should Mexico's economy improve during the coming years, new jobs will be available for sales clerks, food service workers, stock clerks, and office workers.

The twin plant concept, in which an American manufacturer operates a plant in the U.S. and another in Mexico, has increased the manufacturing activity significantly in the Nogales area. If successful efforts continue, other manufacturers also will be attracted to the area, providing employment opportunities for technicians, assemblers, and maintenance workers. The trade and service sector would also benefit from a growing manufacturing sector.

Nogales is one of the major shipping points for fresh fruits and vegetables entering the U.S., which largely determines the level of wholesale trade. As a result, opportunities exist for truck drivers, equipment operators, and laborers. Since this activity is highly seasonal, many jobs are available only during winter and spring. However, the prospects are very good for wholesale trade and distribution operations in the coming years.

The key to economic growth in Santa Cruz is diversity. Its ability to expand the manufacturing base and wholesale trade will determine the continued employment growth in the future.

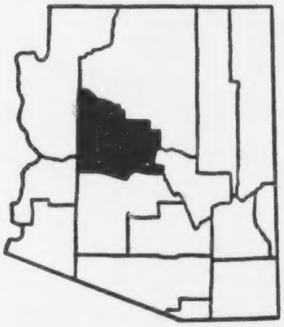
YAVAPAI COUNTY



The economy of Yavapai County is primarily based on tourism, lumber, mining, and some manufacturing activities. The county has experienced steady gains in employment since the beginning of 1985. Nearly 1,000 jobs have already been added this year, causing the unemployment rate to drop to 6.1 percent in August 1985 from the 1984 annual average rate of 6.8 percent.

Mining employment has fallen steadily in 1984 and 1985 and is expected to continue to decline next year. The effect on the Bagdad community has been devastating, but the other communities such as Prescott have managed to develop other sources of vitality. New jobs in manufacturing, mostly in the Prescott area, should help to offset some of the employment losses in mining. Most of the jobs will be entry-level positions in production and equipment maintenance.

Tourism is an important source of employment in Yavapai County. Yavapai County's proximity to Arizona's metropolitan areas ensures continued rapid expansion in recreation-related occupations. Employment should be available in motels, restaurants, retail businesses, and recreation services for cashiers, food service workers, clerks, and maintenance workers.

Slower statewide growth in construction activities in 1986 will affect Yavapai County's lumber-related employment. However, the employment in lumber businesses should increase moderately to replace inventories depleted by the boom in construction in the metropolitan areas of the state. A small number of jobs will be available with the forest and land management agencies. Some jobs will be created as the population expands in the county along with an increased demand for basic public services such as police, fire protectors, and educators. Although workers in a wide variety of occupations will be needed, most openings will be for clerical workers.

Growth and turnover in trade and services will continue to provide most of the employment opportunities in Yavapai County. Jobs will be available for sales clerks, cashiers, and food service workers to serve local residents as well as tourists from nearby metropolitan areas.

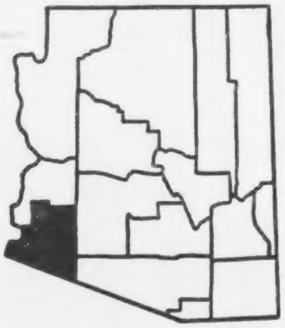
YUMA COUNTY



The economic base of Yuma County consists primarily of agriculture and tourist activities. Employment opportunities in both of these industries are subject to seasonal variation, with employment opportunities rising in the winter season. Rising levels of tourist and recreational activities in Arizona and California will continue to provide seasonal job opportunities in Yuma County's restaurants and motels, mostly for cashiers, food service workers, desk clerks, and housekeepers.

The other major industry in the county is agriculture, which generates even more seasonal job opportunities in picking, packing, warehousing, and shipping. Yuma is also a major distribution center for Mexican fruits and vegetables during the winter months. The importing and distribution of Mexican produce resulted in increased wholesale trade during the 1985 winter season and it is expected that the volume of fruit and vegetable imports will rise in the future. Businesses providing equipment and services to fruit and vegetable operations in Yuma County will provide some jobs for maintenance mechanics and laborers in the future.

Manufacturing activity has been growing at a slow rate in Yuma County. Some jobs will be available for technicians and production workers as the county's small manufacturing base grows. Yuma's climate, comparatively low wages, and access to Interstate 8 should attract more manufacturing and warehousing business in the future. Increased federal spending for defense will also create opportunities for electronics and communications technicians at military facilities.

Yuma County's government employment will rise in the future to serve the county's growing population. Most new jobs will be for teachers and maintenance workers in the local schools and community college.

Yuma County is in the process of transformation from a rural, agricultural economy to an economy based on trade and services. However, the weak Mexican economy has inhibited Yuma County's growth in trade to some degree. The gradual expansion of tourist-related services and growth in wholesale trade will help the local economy provide employment opportunities in the future.

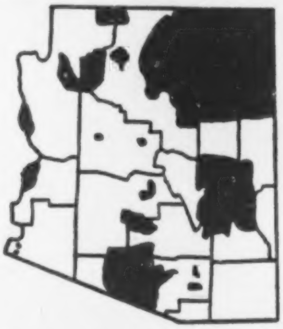
ALL TRIBAL SERVICE DELIVERY AREA



There are 21 Native American reservations in Arizona located within federally-designated areas throughout the state. They cover a combined land area of 18.1 million acres with a total population of approximately 140,000 residents. The Hopi and Navajo reservations constitute the largest area of land and population in the northeastern part of Arizona, followed by the Papago, Fort Apache, and San Carlos reservations in southern and eastern Arizona.

The traditional arts and crafts (i.e., silver and turquoise jewelry, pottery, basket or textile weaving, rug weaving, painting, etc.) are still produced, but they provide for a small percentage of the labor force. Self-employment opportunities, except for a few well-known crafts persons, are generally seasonal and seldom provide adequate yearly income to support an average family.

The various social, health, and job training programs/projects funded by local, state, and federal governments comprise more than 90 percent of all available employment. During the last two years, the federal government's budget reductions resulted in a major decrease in services and a layoff of employees. The tribal government has also experienced financial difficulties which resulted in a hiring freeze and additional layoffs of tribal employees.

Although construction-related jobs have increased for the past two years, presently the home construction program through HUD and the BIA-funded home and road improvement and highway construction are declining due to reductions in federal funding.

The lower skill-level positions are saturated and stable. Conversely, there is continual turnover in professional and technical jobs. Unfortunately, outside skilled labor have been filling the vacancies. Very few reservation residents meet the requirements.

There is limited private sector employment. Unfortunately, no significant increase is anticipated in the near future. There is need for job training programs which will complement economic development at the local level. This requires that the unskilled labor force be trained through well-designed programs such as OJT, skills training, youth programs, work experience, and private sector training.

The Tribal Service Delivery Area is committed to the purpose of the Job Training Partnership Act and will continue to utilize all resources for successful training programs for economically disadvantaged reservation residents and those facing barriers to employment.

All Reservations	10,733	32,355	44.66	x .40 + 40	57.86
UNITED STATES	5,417,178	23,625,720			

The adjustment factor is calculated by dividing the ratio of the local economically disadvantaged youth to adults by the national ratio (22.93 percent) and substracting 1 from the result.

((Local ED Youth/Local ED Adults)/(National ED Youth/National ED Adults)) - 1 * 100 = Adjustment Factor

The adjustment factor represents the magnitude of the difference between economically disadvantaged persons in the local SDAs with the same individuals nationally and it affects the amount allocated for services for youth, which is increased or reduced proportionally by the factor.

APPENDIX B

POVERTY INCOME GUIDELINES
EFFECTIVE MARCH 8, 1985

FAMILY SIZE	POVERTY GUIDELINES
1	$ 5,250
2	7,050
3	8,850
4	10,650
5	12,450

For each additional family member add $1,800.

SOURCE: U.S. Department of Health and Human Services, March 1985.

APPENDIX C

LOWER LIVING STANDARD INCOME LEVEL
(70 PERCENT LLSIL)
EFFECTIVE JUNE 26, 1985

FAMILY SIZE	METROPOLITAN INCOME	NON-METROPOLITAN INCOME
1	$ -NA-	$ -NA-
2	7,390	7,580
3	10,140	10,410
4	12,520	12,850
5	14,770	15,160
6	17,280	17,730
For each additional person add. . .	$2,510	$ 2,570

NOTE: These figures are only for the purpose of determining eligibility for JTPA programs and should not be used for any other statistical purposes. Since the Bureau of Labor Statistics has not revised the lower living family budget (on which the LLSIL is based) since 1981, ETA used consumer price index changes to update the LLSIL to meet JTPA requirements.

SOURCE: U.S. Department of Labor, Employment and Training Administration, July 17, 1985.

GLOSSARY OF TERMS AND CONCEPTS

Aid to Families with Dependent Children (AFDC)
Provides financial assistance to children deprived of support or care due to death, divorce, absence, or disability of one or both parents. It also provides for rehabilitation and job placement for children and parents through the Work Incentive Program (WIN) and referral to Vocational Rehabilitation or to Job Service, and for children and/or family services.

Civilian Labor Force
All persons, 16 years of age and over, who are not in institutions nor in the Armed Forces, and are either "employed" or "unemployed."

Confidentiality Rules for Unemployment Insurance Data
Data cannot be released without written consent if one of the following are true:

1) There are fewer than three firms in an industry.
2) If there are three or more firms and one firm accounts for 80 percent or more of the employment in that industry.

Current Employment Statistics (CES) Survey
A cooperative effort between Arizona and the United States Bureau of Labor Statistics which produces monthly estimates of employment, hours, and earnings information.

Econometric Model
A system of mathematical equations used to forecast economic conditions and to investigate alternative economic scenarios.

Economically Disadvantaged
For JTPA purposes, an individual who is a member of a family which receives public assistance or whose family income does not exceed the higher of either the poverty level as determined by the Office of Management and Budget or 70 percent of the Lower Living Standard Income Level (LLSIL). Data obtained from the 1980 Census refers only to the poverty level.

Employed
Individuals, 16 years of age and older, who are working as paid employees, are self-employed, or work 15 or more hours as unpaid workers in a family business. Also included are those who are temporarily absent from jobs or businesses due to illness, bad weather, vacations, labor disputes, or personal reasons.

Food Stamp Program
Provides low-income households with increased food purchasing power to enable them to obtain a more adequate nutritional diet through a federal program regulated by the U.S. Department of Agriculture. DES administers the distribution of food stamp coupons that may be exchanged in normal retail grocery outlets for food items.

General Assistance
Provides financial aid to persons who are unemployable because of a temporary physical or mental disability; persons permanently disabled, but not receiving Supplemental Security Income benefits; persons required in the home to care for a disabled relative; and families with foster children, age 18-21, continuing their education.

Health Condition
A physical or mental problem which has lasted for six months or more.

Industry
A distinct group of productive or profit-making enterprises, such as manufacturing, retail trade, or services. Indistries or industrial groups used here are defined in the Standard Industrial Classification Manual 1972 of the U.S. Office of Management and Budget.

Job Training Partnership Act (JTPA)
A federal act, passed in 1982, designed to establish programs to prepare youth and unskilled adults for entry into the labor force and to provide job training for economically disadvantaged individuals and others suffering serious barriers to employment.

Labor Market Area
An economically integrated geographic area within which individuals can reside and find employment within a reasonable distance or can readily change employment without changing their place of residence.

Native American Reservations
Geographic areas with boundries established by treaty, statute, and/or executive or court order.

Not in the Labor Force
Persons who are not seeking employment or are unable or unavailable to work regardless of the reason, e.g., homemakers, children less than 16 years of age, students, retirees, or institutionalized persons.

Occupation
An activity which serves as one's regular source of livelihood, such as welding, mechanical engineering, or elementary school teaching.

Population
The number of inhabitants in an area.

Private Industry Council (PIC)
A group of individuals, within each JTPA SDA, representing private business, organized labor, educational agencies, rehabilitation agencies, community-based organizations, economic development agencies, and the public employment service. Their major duties are to provide policy guidance for JTPA activities and the oversight of those activities.

Research Administration
Established in April 1984 within the Arizona Department of Economic Security to consolidate Labor Market Information, Unemployment Insurance Research, and the Arizona State Occupational Information Coordinating Committee.

Service Delivery Area (SDA)
A designated area within Arizona which receives JTPA funds based upon a formula and uses those funds to establish employment and training programs.

State Job Training Coordinating Council (SJTCC)
A thirty-member council which advises the Governor on the operation of JTPA programs within the state.

Supplemental Payments Program (SPP)
Provides payments to eligible aged, blind, or disabled persons who qualify for nursing home care or licensed supervisory home care. The recipient must be receiving Supplemental Security Income (SSI) or precluded from receiving SSI solely because he resides in a public nursing home. The SPP (a state program) data do not include any SSI (a federal program) payment data.

Unemployed
Individuals, 16 years of age and older, who are not working, but are looking for work and are available to work. Looking for work requires specific efforts such as sending resumes or canvassing employers.

Unemployment Rate
Percent of the labor force that is unemployed. It is calculated by dividing the number unemployed by the labor force, and multiplying the result by 100.

Work Disability
A health condition which limits the kind or amount of work, or prevents working at a job or business.

(New) Yuma County/(Old) Yuma County
In 1983, La Paz County was created from part of Yuma County. (New) Yuma County refers to Yuma County after the division. (Old) Yuma County refers to Yuma County before the division.

*Proportions of unskilled workers were determined from the proportion of the attached list of occupations to the county's total wage and salary employment.

**The labor force estimate was made with the assumption that the proportion of unskilled in the labor force is the same as among the wage and salary employment.

SUPPLEMENT II

GROWING INDUSTRIES AND OCCUPATIONS

The following list of growing industries was determined by using multiple data sources, including Unemployment Insurance reports, Current Employment Statistics data, and local periodicals. A seven-year span, from 1979 through 1985, was used in order to negate the effects of the business cycle. Within each county, the industries are arranged in descending order based on the amount of employment growth from March 1982 to March 1985.

The corresponding list of occupations was determined by examining Occupational Employment Statistics data. The occupations with the highest employment levels are given for each growing industry and are listed in descending order.

SOURCE: Arizona Department of Economic Security, Research Administration, January 1986.

GROWING INDUSTRIES

APACHE COUNTY
- Communications and Public Utilities
- Real Estate
- Automotive Dealers and Service Stations (Retail Trade)

COCHISE COUNTY
- Eating and Drinking Places (Retail Trade)
- General Merchandise and Apparel (Retail Trade)
- Food Stores (Retail Trade)
- Machinery (except Electrical) Manufacturing
- Printing and Publishing Manufacturing
- Medical and Other Health Services
- Personal Services

COCONINO COUNTY
- Food Stores (Retail Trade)
- Medical and Other Health Services
- Transportation, except Railroads
- Miscellaneous Retail Trade
- Repair Services
- Finance and Insurance

GILA COUNTY
- Miscellaneous Retail Trade
- Business Services
- Eating and Drinking Places (Retail Trade)
- Wholesale Trade

GRAHAM COUNTY
- None

GREENLEE COUNTY
- Medical and Other Health Services

LA PAZ COUNTY
- Automotive Dealers and Service Stations (Retail Trade)

MARICOPA COUNTY
- Special Trades (Construction)
- Food Stores (Retail Trade)
- Business Services
- Eating and Drinking Places (Retail Trade)
- Miscellaneous Retail Trade
- Wholesale Trade
- Medical and Other Health Services
- Electrical Machinery Manufacturing
- Building Construction
- Miscellaneous Services
- Finance and Insurance
- Hotels and Other Lodging Places (Retail Trade)
- Real Estate
- Transportation Equipment and Other Durables Manufacturing

SUPPLEMENT III

DECLINING INDUSTRIES AND OCCUPATIONS

The attached list of declining industries was determined by using multiple data sources, including Unemployment Insurance reports, Current Employment Statistics data, and local periodicals. A seven-year span of information, from 1979 through 1985, was used in order to negate the effects of the business cycle.

The corresponding list of occupations was determined by examining Occupational Employment Statistics data. For each declining industry, only those occupations having greater than a third of their employment in the declining industry of that county are included. Those occupations with a third or less of their employment in the declining industry can be expected to have other opportunities for employment within the labor market. In addition, an occupation was not listed if it contained fewer than five employees in an industry. The occupations are listed in descending order by employment level.

SOURCE: Arizona Department of Economic Security, Research Administration, January 1986.

DECLINING INDUSTRIES

APACHE COUNTY
None

COCHISE COUNTY
